COURSE TEMPLATE

Claude OS

The Operating System for AI-Native Startups - created by Ajit Jaokar https://www.linkedin.com/in/ajitjaokar/ using Claude

Updated: March 2026 | Claude Opus 4.6 & Sonnet 4.6

The Big Idea: What Is a Claude OS?

Why this is different from 'using AI tools'

"An Operating System is the platform everything else runs on. Claude OS is the platform your startup runs on."

❌ Traditional Startup

- Open AI tool when stuck
- One-off prompts, no memory
- Each person uses AI differently
- AI as assistant — you do the work
- Starts from zero every session

✅ Claude OS Startup

- Claude runs the workflow layer
- Persistent Projects + Skills + Memory
- Systemized, team-wide AI processes
- AI as execution — you set direction
- Compounds: smarter every week

The Three-Layer Architecture

Every Claude OS is built on these three layers

LAYER 1

Interface Layer

Your Personalized Desktop

- Projects — persistent context for each product/team
- Skills — Claude's learned, repeatable workflows
- Memory & Style — your brand voice and preferences
- User Preferences — how Claude communicates with you

LAYER 2

Workflow Layer

Defined Processes, Not Blank Pages

- PRD generation from rough ideas
- Weekly competitive intel synthesis
- Customer interview analysis pipeline
- Sprint planning and ticket generation

LAYER 3

Agent Layer

Autonomous Work While You Sleep

- Opus 4.6 Agent Teams on long-horizon tasks
- Claude Code building tools overnight
- Claude in Chrome automating browser workflows
- Cowork handling file and data pipelines

Course Structure — 6 Modules

Each module builds on the last to complete your Claude OS

MODULE 01

Foundations

Context, Projects & Skills setup

3h

MODULE 02

Interface Layer

Personalizing your Claude OS desktop

3h

MODULE 03

Workflow Layer

Defining your core startup workflows

5h

MODULE 04

Agent Layer

Autonomous agents & Claude Code

5h

MODULE 05

Growth Stack

Sales, content & customer workflows

4h

MODULE 06

OS Operations

Team rollout, measurement & evolution

3h

Module 01 — Foundations

Building the mental model before touching any tool

Why OS, Not Tool

The mindset shift: from prompting to systems thinking. What a Claude OS does that ad hoc AI use never will.

The Claude Ecosystem (2026)

Models: Haiku 4.5 / Sonnet 4.6 / Opus 4.6. Surfaces: claude.ai, API, Code, Cowork, Chrome. When to use which.

Prompt Engineering for PMs

The Founder Prompting Framework: Role + Context + Constraints + Output format. XML tags. Extended thinking.

Projects & Context

Creating your first Project with startup context baked in. How persistent context compounds over time.

Lab: Configure your first Project with your startup's context, goals, and vocabulary. Run your first extended thinking session.

Module 02 — The Interface Layer

Building your personalized Claude OS desktop

Your Interface Layer is the accumulating infrastructure that makes every Claude session start from strength, not scratch.

Skills Library

Teach Claude your workflows by demonstration. Weekly report format. PRD structure. Email voice. Each Skill is a reusable, shareable process.

Memory Architecture

What Claude remembers across sessions. How to guide what gets stored. Building institutional knowledge over time.

Style & Voice

Calibrate Claude's output to your brand: formal/casual, depth, formatting preferences. Set once, applied everywhere.

Team Deployment

Sharing Projects and Skills across your team. Org-wide Skills on Team/Enterprise plans. Onboarding new hires into your Claude OS.

Lab: Create 3 Skills for your most repeated workflows. Set your brand voice. Build a team-shared Project.

Module 03 — The Workflow Layer

Turning recurring tasks into defined, reliable processes

The Workflow Layer is where you eliminate blank-page friction. For every recurring task, there's a Claude process — not a new prompt.

Product Workflows

- PRD from rough idea (15 min)
- Feature spec generation
- Roadmap prioritization (RICE/MoSCoW)
- User story batch writing

Research Workflows

- Weekly competitive brief (automated)
- Market sizing from public data
- Customer interview synthesis
- Trend monitoring + summary

Execution Workflows

- Sprint planning from backlog
- Meeting notes → action items
- Investor update drafts
- Data analysis & interpretation

Lab: Map your top 5 recurring tasks. Build Claude Skill + prompt template for each. Run all 5 in one 90-minute session.

Module 04 — The Agent Layer

Delegating autonomous, multi-hour work to Claude

Opus 4.6 Agent Teams

Multiple Claude instances collaborating in parallel. Orchestrator + sub-agent architecture. 14.5-hour autonomous task horizon. How to structure long-running work.

Claude Code

Natural language ⟶ working software. Building internal tools, dashboards, automation scripts. No engineering background required to direct and review.

Claude in Chrome

Browser workflow automation. Record once, repeat forever. Reading console logs, DOM state, network requests. Automating any web-based task.

Cowork + Tool Integrations

Desktop automation for non-developers. Gmail, Calendar, Slack integrations. File processing pipelines. CRM enrichment and sync.

Lab: Design and run a multi-step agent task (e.g. weekly competitor report or lead research pipeline). Review outputs and refine.

Module 05 — The Growth Stack

Acquiring and retaining customers with Claude-powered workflows

Content at Scale

- Brand voice set in Style feature
- Content calendar + batch generation
- SEO-optimized blog and landing copy
- A/B copy variant creation

Sales & Outreach

- Lead research-to-outreach pipeline
- Personalized proposal customization
- Objection handling scripts
- CRM enrichment via Claude agents

Customer Success

- Support ticket synthesis & trends
- NPS and survey analysis at scale
- Help doc and FAQ generation
- Onboarding flow optimization

Comms Intelligence

- Gmail: triage, draft, summarize
- Calendar: scheduling intelligence
- Slack: async synthesis
- Meeting prep and follow-up automation

Lab: Build a lead research → outreach pipeline using Claude + Gmail integration. Target: 20 personalized emails in 30 minutes.

Module 06 — OS Operations

Running, measuring and evolving your Claude OS

Team Rollout Playbook

Introducing Claude OS to your team without resistance. Change management for AI adoption. The 2-week onboarding template.

Measuring ROI

What to track: time saved per workflow, quality delta, team adoption rate. Building your AI productivity dashboard.

OS Maintenance

Auditing and updating Skills. Refreshing Project context as your startup evolves. Deprecating workflows that no longer serve.

Staying Current

Claude's release cadence: Haiku / Sonnet / Opus. Evaluating new features for workflow fit. Community resources and update practice.

Capstone: Present your full Claude OS — Projects, Skills library, agent workflows, and 90-day evolution roadmap.

Your 90-Day Claude OS Rollout

From first session to company-wide operating system

MONTH 1

Boot Up

Week 1–2

- Complete Modules 1 & 2
- Configure your Project + 3 core Skills
- Run first extended thinking session

Week 3–4

- Complete Module 3
- Automate top 3 recurring workflows
- Measure baseline time savings

MONTH 2

Scale

Week 5–6

- Complete Modules 4 & 5
- Deploy first agent workflow
- Launch growth stack (outreach pipeline)

Week 7–8

- Roll out to 1–2 team members
- Expand Skills library to 10+
- Build first Claude Code internal tool

MONTH 3

Operate

Week 9–10

- Complete Module 6
- Full team onboarded to Claude OS
- ROI dashboard live

Week 11–12

- Capstone presentation
- Ship first AI-native product feature
- 90-day review + next quarter plan

Why Claude OS — The Numbers

What the data says about Claude-powered teams

14.5h

Opus 4.6 autonomous task horizon (50% time)

3–5×

Faster PRD & spec generation for PM teams

10+

Hours/week saved per founder on information work

5→20

Effective team size with a mature Claude OS

77%

SWE-bench score — Claude Sonnet 4.6 coding

2 wks

Average time to first productivity gain after setup

Updated March 2026 · Claude Opus 4.6 · claude.ai · docs.claude.com

The Outcome

A startup that runs on Claude OS doesn't just use AI. It thinks in systems.

- Every recurring task has a defined Claude workflow
- Your team onboards into accumulated AI intelligence
- Agents run complex work autonomously while you focus on strategy
- Your Claude OS compounds — smarter and faster every month
